## The Bunker Secure Cloud

### The flexibility of the cloud with the security of The Bunker

The Bunker's Secure Cloud provides all the benefits of cloud computing plus the security needed for the safekeeping of your information assets. You can be reassured that your data will always be housed in Europe's most secure data centre, and whenever demand increases, our cloud solution grows quickly and seamlessly.

*The Bunker's Secure Cloud blends security with flexibility and scalability*

### A low cost alternative to dedicated servers

With no capital outlay required to purchase equipment, and a fully managed service providing a continually available service, our cloud platform comes in three standard sizes allowing you to vary the power of your cloud as your needs change.

Delivered as a monthly service, cloud users start with the package that most closely matches their needs, and scale up or down as their needs change – moving from small to medium to large and back again as requirements vary.

	Small	Medium	Large
vCPU	1	2	2-4
vRAM	1 / 4 / 8 GB	4 / 8 / 16 GB	24 / 32 GB
Typical usage	Web servers	Application hosting	Database intensive application

If you need a custom configuration, contact us with the details of what you require and we will provide a quotation for your specific system. For example, you may need additional bandwidth, RAM or storage, a secure connection to a front-end application or to a back-end database. We can add these to a standard package or design a bespoke cloud to your exact requirements.

Unlike public clouds, where consumers require per-minute billing and change their configuration frequently, we know that business users value cloud security more highly than unlimited flexibility. We support upgrading or downgrading resources in fixed increments which allows us to provide the security of dedicated servers for each customer along with the low cost, resource flexibility and pay-per-use characteristics of cloud computing.

“The flexibility of the cloud with the benefits of The Bunker's security”

## The Bunker®

### Key benefits

Alongside the usual benefits of using cloud solutions such as cost savings and flexibility, the Secure Cloud from The Bunker additionally provides the following benefits:

- For security, every customer's cloud runs on a dedicated blade server
- Data in a known and fixed location: inside The Bunker's ultra secure facility
- No server contention from other users: you're on a dedicated blade server
- The physical, digital and human security that only The Bunker can deliver
- We support multiple operating systems, so you can use whichever applications you wish
- Meaningful service level agreement provided
- 24x7 support, monitoring and alerts
- We provide complimentary services and solutions as your needs evolve
- Our cloud data centre is ISO 27001 accredited and PCI DSS certified

### The Bunker Protocol™

All Bunker-base systems and applications are protected by The Bunker Protocol, our proprietary, Ultra\* Secure process framework that includes:

**Military-Grade Data Centres** – in our underground bunker outside the M25 in Kent and our mirror facility in Berkshire. Both are protected by integrated processes for physical, digital and human security

**Hardened Source™** – our unique combination of open source and proprietary technologies built and integrated in-house from the source code up

**Flexible Support** – our services desk uses ITIL v3 best practices for all service requests, and you decide what amount of incident management is appropriate to your in-house skill set and business processes
